Macintosh 128K and 512K: Using the Calculator and Keypad

=====

Article Created: 8 October 1984
Article Last Reviewed: 27 May 1992
Article Last Updated: 22 December 1989

On the original Macintosh Numeric Keypad, the keys ENTER, comma, plus, and minus do not seem to correspond with the keys on the Calculator desk accessory. However, although the keycap graphics do not match the Calculator keys, there is a calculator function for each keycap. For instance, the ENTER key on the keypad corresponds to the plus key on the Calculator. So, if your fingers are accustomed to a 10-key numeric keypad, you can use the Macintosh keypad and look at the screen and not the keys. Otherwise, please bear in mind the differences between the keys on the Calculator and those printed on the keycaps.
