Pascal III: Changing text modes

=====

The Write and Writeln procedures are unable to send the necessary control sequences to change the text mode to 40 columns black and white; use the Unitwrite procedure instead. The correct syntax is:

```
Program Demo;  
Var ans :String;  
  
Procedure Control (number:integer);  
Var tryit :CHAR;  
Begin  
    tryit := CHR (number);  
    Unitwrite (1, tryit, 1, , 12);  
End;  
  
Begin  
    Control (16);  
    Control (0);  
    Readln (ANS);  
End.
```
