Pascal III Editor: Inserting control characters

==

The Pascal Editor recognizes 32 different control characters. The trick to
producing them is to press the OPEN-APPLE key together with whatever key is
required to obtain the desired control character, as described in the table on
p. 136 of the Standard Drivers Manual. These characters go into the file
with their high bit set to one, but that probably won't be a problem: most
programs and peripherals ignore the high bit anyway.
