Pascal: Pascal Turnkey

Revised: 12/5/84
Security: Everyone

Pascal: Pascal Turnkey

=====
Create a Pascal Turnkey system by transferring the desired program code to the boot diskette and changing its name to System.Startup. When no file by that name is present on the boot volume, the system defaults to the command line.

To execute the System.Startup code from the command line, type X (for execute), and then

SYSTEM.STARTUP.

The final period prevents the operating system from appending the .CODE suffix to the file name before trying to execute it.
