Multiplan: Why Some File Names Don't Appear in Scrolling Window

=====

This article last reviewed: 27 January 1988

Microsoft Multiplan, versions 1.0, 1.01, and 1.02, have no inherent limit as to the NUMBER of names that they hold, only the SIZE of the name file. That is, many small names will store as well as a shorter list of long names -- up to the limit of available memory.

Under some high memory-use conditions, however, the Name scroll-box or the Link scroll-box can hold only the FIRST 45 NAMES. The rest are there, and remain active, but the scroll-box will only show the first 45.
