MacWorks: Which Lisa boot ROMs to use

=====

The same boot ROMs recommended for Lisa software are fine for systems running MacWorks. In addition, square pixel ROMs are available for systems running only MacWorks XL. They are:

SYSTEM	CPU	I/O	Sq PIXELS (CPU-I/O is the same)
Lisa 2/10-Mac XL	F, H	D (88)	A3
Lisa 2	D, H	B (A8)	A3

Although MacWorks has been thoroughly tested with the earlier ROMs, consider upgrading them if a system with earlier ROMs shows illogical errors, such as locked disk errors when initializing a disk, which may occur after loading new system files.
