Pinpoint 1.0/AppleWorks/MouseDesk Incompatibility

========================================================================

There is a problem using Pinpoint installed on AppleWorks run from MouseDesk.

Symptom:

MouseDesk removes the /RAM drive and does not install it when AppleWorks gains
control. Pinpoint attempts to access the RAM drive and crashes to the monitor
before AppleWorks even runs.

User Response:

The user should either

(a) send back the Pinpoint disk to recieve a more recent version (this problem
has been corrected in Version 1.1).

(b) the user can apply a minor patch to Pinpoint and re-install to AppleWorks.

The patch procedure (Version 1.0 only) is as follows:

     1. Backup your Pinpoint disks.
     2. Startup your Apple with ProDOS BASIC.
     3. Place a copy of the Pinpoint Installation disk  in drive 1, slot 6.
     4. Type "PREFIX,S6" (less the quotes, of course) terminate each line
        with the Return key.
     5. Type "BLOAD PINPOINT.SYSTEM,TSYS,A$2000"
     6. Type "POKE 9203,96"
     7. Type "BSAVE PINPOINT.SYSTEM,TSYS,A$2000,L15104"

Resolution:

Version 1.1 has corrected this problem.
