Macintosh Plus Upgrade: Removing The Security Kit

=====================================================================

Article Created: 10 March 1986
Article Last Reviewed: 24 July 1992
Article Last Updated: 31 March 1992

TOPIC -----------------------------------------------------------

The following provides an explanation on removing the secuirty kit from a
Mac Plus.

DISCUSSION ------------------------------------------------------

Removing the security kit from the housing and keyboard is fairly simple
once you've opened the case.  From the inside of the case, merely pry the
retaining prongs apart with a flatblade screwdriver and slip the plug out.
