FullPaint and the Hyperdrive

```
======================================================================
```

FullPaint requires 384K just to launch.  If the HyperDrive Volume Manager is
not configured properly, the program will not load and will tell the user
that he needs to check RAM Cache.

Following is the procedure for getting FullPaint to run on non-XP HyperDrives:

'Preferences' must be set to 'Maximum Compatibility'

OPEN Volume Manager

Choose PREFERENCES from the CREATE menu

Set the buttons to Maximum Compatibility

Close the PREFERENCES window

QUIT the Volume Manager

Choose SHUTDOWN from the Special menu
