FullPaint and LaserPrint

==

2/6/87

LaserPrint

  LaserPrint is a utility by A2S bundled with FullPaint that enhances the
  resolution of FullPaint documents for printing on the LaserWriter.

   Error While Printing

   Clicking 'Print Final' generates either an 'Image mask' error or
   Offending Command 0' within Postscript in the LaserWriter.

   Correction - Use PRINT DRAFT instead of PRINT FINAL

     In effect, PRINT FINAL is trying is trying to convert (smooth)
     documents into 300 dpi that are already 150 dpi or 300 dpi.
      PRINT FINAL is reserved for future versions of PostScript.
    PRINT DRAFT bypasses smoothing routines.

       + Clearing the error

        Turn off the LaserWriter and turn it back on

   Printed Documents Not Smooth

   Smoothing of documents for LaserPrint must be done by hand in Fat
   Bits within FullPaint.

   + Correction

    - After splitting into 4 or 16, go back to FullPaint

    - Smooth all the documents in Fat Bits

Setting ruler untis to pixels and having Mouse Spot on screen
makes it easier to retain shapes that go from one document to
another.

- Return to LaserPrint

- Queue up documents as per the grid

- Click PRINT DRAFT
