FullPaint Won't Boot?

==

2/19/87

Sometimes an error message appears when the user tries to launch FullPaint
saying that FullPaint requires 384K to run. This message may occur on
both 512's and Plus'. Nothing is wrong with FullPaint or the Mac - the
RAM cache needs to be turned off.

```
    1.  Turn RAM Cache off
            RAM Caching in the Control Panel collides with the same
            address that FullPaint uses to open extra documents.
            If Caching is on, FullPaint will NOT open under any
            circumstances.
        1.1.  Boot FullPaint
        1.2.  Choose CONTROL PANEL from the Apple menu
        1.3.  Click the OFF button for RAM Cache in lower right of window
        1.4.  Close the CONTROL PANEL
        1.5.  Click SHUTDOWN from the Special menu
        1.6.  Reboot
```
