Macintosh II: Pinouts To NEC Multisync Monitor (6/94)

=====
Article Created: 24 October 1988
Article Reviewed/Updated: 23 June 1994

The Macintosh II video card can drive the NEC Multisync monitor. Here are the pinouts, provided by NEC, for connecting a Macintosh II to the Multisync's 9-pin connector:

Macintosh II	Nec MultiSync	signal name
1	6	red video ground
2	1	red video
5	2	green video+ Composite analog sync
6	7	green ground
9	3	blue video
11	7	green ground
13	8	blue ground
14	9	ground

Set the monitor to Analog and manual mode.
