Autologic and Monotype Typesetters: Introduction

=====

Article Created: 11 February 1988
Article Reviewed/Updated: 22 July 1993

The Autologic APS-5 and the Monotype LaserComp are high-end typesetters used in the printing industry, especially by newspapers. These typesetters can do a limited bit-map image, but require information in ICL or PostScript.

Autologic, Monotype, and their ICL page description language were all developed in the 1970s. They are analogous to, and compete with, newer products like the Linotype LN300 using PostScript from Adobe.

To locate a vendor's address and phone numbers, use vendor name as a search string.
