IBM 9375 and Macintosh 327x Connectivity

==

This article last reviewed: 10 February 1988

Because the IBM 9375 is a member of the 370 family, 3725s can be attached and AppleLine, Avatar, and MacIrma can be connected. The NetWay requires a specific ICA (Integrated Communications Adapter), one with a Sync RS-232 port, to function with this system.

The 937X processor contains a communications processor card, which can be thought of as the hardware equivalent of a 3725. This processor card can support a number of line adapter cards that interface with devices such as 3174 and 3274s. The ICA is therefore functionally equivalent to a 3725, a 3174, or a 3274.
