TOPIC ---

Will MultiFinder work with TOPS (version 2.0)?

DISCUSSION --

MultiFinder works with TOPS version 2.0, and disk space can be found to
use it with only a single floppy drive.

A bootable Macintosh disk using System Software 5.0 with MultiFinder
requires at least these files:

- System
- Finder
- MultiFinder

You can save more room by removing unneeded desk accessories and Fonts
from the System file. The System file must contain the TOPS DA, and four
fonts: Chicago 12, Monaco 9, Geneva 9, and Geneva 12. All other fonts and
DAs can be removed to save space.

NOTE: If you plan to access the Control Panel, you will need that DA
installed, along with the CDEVs necessary to perform the desired functions:
"General", for example.

We suggest you pare down a System 5.0 disk to your minimum requirements,
leaving as much disk space as possible, then install TOPS 2.0.
