Japanese ImageWriter II is Universal Model

=====

This article last reviewed: 23 March 1988

The ImageWriter II sold in Japan is the universal model. It supports:

- 100 VAC +/- 10%, and 50/60Hz
- 120 VAC +/- 10%, and 50/60Hz
- 140 VAC +/- 10%, and 50/60Hz
- 200 VAC +/- 10%, and 50/60Hz
- 220 VAC +/- 10%, and 50/60Hz
- 240 VAC +/- 10%, and 50/60Hz

If the line voltage drops below these levels, the printer will not function properly. A step-up transformer or a voltage stabilizer should be used under other conditions.

The ImageWriter II sold in the U.S. requires 120 volts (+/- 10%), and 60Hz.

This information is also found on page 85 of the ImageWriter II Owner's Manual, and in the Tech Info Library article titled "ImageWriter II: Spec Sheet."
