          • For technical accuracy.

TOPIC ---

A scan line sometimes rolls down the screen on video recordings of a
Macintosh screen.

DISCUSSION --

The best way to get rid of the scan line is to use a modification that
lets the Macintosh accept an external composite sync. This genlocks the
Macintosh screen to the camera.

One GenLock interface, for Macintosh through SE, is supplied by Digital
Design Labs.

To locate a vendor's address and phone numbers, use the vendor name as a
search string.
