LaserWriter and System Software for Mixed Installations

```
======================================================================
```

This article last reviewed: 16 June 1988

Anyone dealing with a variety of Macintosh models (including Macintosh
512Ke systems) in work group networks with a recent LaserWriter model
(such as the LaserWriter IINT) needs to be aware of the different
combinations of System/Finder versions and LaserWriter software. The Tech
Info Library article "Macintosh: Recommended System Software Configurations"
contains most of the information needed to determine which System/Finder
versions to use on each system.

LaserWriter versions later than 4.0 offer the advantages of faster and
larger bitmap printing and overall faster operation. However, Apple does
not recommend the use of LaserWriter drivers later than 4.0 when using
Macintosh 512K or 512Ke systems.
