TOPIC -----

On my Macintosh II, I can't get MacPaint, FullPaint, SuperPaint, or other painting programs to work correctly. The menubar disappears, and sometimes the programs don't function at all.

DISCUSSION -----

Try resetting the color or gray scale setting. Go to the Control Panel and select the "Monitors" icon, then set the color to "gray" and the number of gray scales to "2".

If you are still having problems, call the developers of your specific software packages and check on compatibility with your Macintosh and the version of system software you are running. You may need to upgrade your software.
