HyperCard: Text In Buttons Treated As Bit-Map Graphics

=====

Article Created: 21 July 1988  
Article Last Reviewed: 10 July 1992  
Article Last Updated: 10 July 1992

TOPIC -----

Why does the text inside my HyperCard buttons (the button name, for instance) look different from text in the same font and size used in a field?

DISCUSSION -----

The reason for this is that the button, including the text in it, is treated as a bitmap graphic and is printed as such. Text in a field works off the font, whether it is Postscript, TrueType, or bitmap.
