Products That Enable Shared Serial Devices on AppleTalk

```
======================================================================
```

This article last reviewed: 2 August 1988

If you need to share serially-attached products on an AppleTalk-based LAN --
such as Hewlett-Packard plotters, or HP LaserJets -- Mesa Graphics' Plot-It
driver will drive a variety of plotters, including Hewlett-Packard models.

When used with Shiva's NetSerial product, Plot-It can drive a plotter over an
AppleTalk network.

Both NetSerial AND Plot-It may be obtained through Mesa Graphics.

For more information, search under: "Mesa Graphics" or "Shiva Corporation"
