Macintosh II: Using It As A Server Without A Monitor

======================================================================

Article Created:  31 January 1989
Article Last Reviewed:  29 June 1992
Article Last Updated:

TOPIC -----------------------------------------------------------

Can I use a Macintosh II without a monitor if I'm using it as an
AppleShare file server?

DISCUSSION ------------------------------------------------------

You can use a Macintosh II without a monitor as an AppleShare file server
only under AppleShare v2.0 or later. Earlier versions of AppleShare do not
support such a configuration.

You could also install Farallon's Timbuktu on the file server and operate
it remotely from another Macintosh.

To locate a vendor's address and phone numbers, use the vendor name as a
search string.
