InterMail 1.36 Patch Available

===

This article last reviewed: 16 March 1989

InterMail version 1.36 performs unpredictably with System software 6.0 and later versions. Until Microsoft releases 2.0, the best you can do is to get a patch to correct the problem. The patch is available directly from Microsoft or from CompuServe. Note: the patch upgrades version 1.36 to version 1.37.
