System 6.0.2 & 6.0.3: Printing Changes "Last Modified Date"

==

This article last reviewed: 16 May 1989

A user noticed that after printing to an ImageWriter or LaserWriter, the
"last modified" date of the Finder and the printer driver changed to the
current date. Also, changing a setting in the Control Panel changes the
"last modified" date of the System changes to the current date. This occurs
with System 6.0.2 and System 6.0.3.

Tech Comm engineers were unable to create a situation that changes the "last
modified" date of the Finder. However, the change in the "last modified"
date of the printer driver and the System file is normal.
