Macintosh-to-Texas Instruments System 1300 Connectivity

=====
This article last reviewed: 22 June 1989

TOPIC -----

A customer would like to use his Macintosh as a replacement for his Texas Instrument terminal, which is connected to a TI System 1300.

DISCUSSION -----

Texas Instruments System 1300 runs the Xenix operating system. A terminal emulation package that supports VT100 will work well in this environment. MacTerminal is one telecommunication package that provides VT100 emulation on the Macintosh.
