PowerPoint: How To Speed Up Printing

=====================================================================

This article last reviewed: 6 September 1989

TOPIC --------------------------------------

Here is a tip to speed up printing for PowerPoint users

DISCUSSION ---------------------------------

From "One-on-One with Microsoft" newsletter, Summer 1989, p.6:

The LaserWriter printer is optimized for printing bitmaps in Tall (Portrait)
orientation.  Normally, however, PowerPoint presentations are printed in Wide
(Landscape) orientation.  To avoid slow printing, deselect the Faster Bitmap
Printing option in the Page Setup dialog box.
