TOPIC ---

I am looking for a C cross-compiler that works under A/UX 1.1 and produces
code for MS-DOS (Intel 8086 and 80286). What do you suggest?

DISCUSSION---

We do not know of any third-party system developer who has a specific C
cross-compiler for A/UX 1.1 that can produce code for MS-DOS Intel 8086 and
80286. However, we know of a couple of third-party system developers
(listed below) who have C cross-compilers running under a variety of UNIX
System V for 8086, 80286, and 80386 codes. Contact them directly. For
more details, search the Tech Info Library under any of the company names
given below.

InterMetrics Inc (bought out Whitesmiths, Ltd.)
Product: Version 3 C Cross-Compiler

Lattice, Inc.
Product: Lattice C Cross-Compiler

MetaWare Incorporated
Product: High C Compiler

Oasys
Product: Microsoft Cross C Development System

Omron Tateisi Electronics Co.
Product: Cross C Compiler

Green Hills Software Inc.
Product: Optimizing compiler C-386
