Macintosh: Twinax/Coax Card Supports One Operation at a Time

==

This article last reviewed: 19 September 1989

TOPIC --

If I plugged a twinax connection and a coax connection into an Apple
Twinax/Coax Card, can I work on both host environments simultaneously. (That
is, run simultaneous 3270 sessions and 5250 sessions under MultiFinder)?

DISCUSSION ---------------------------------------

You cannot use the twinax and coax connections simultaneously on the Apple
Coax/Twinax Card. This is due to the limitation of the chip set, which can
support only one operation at a time.
