CE QuickMail: Apple Tape Backup Incompatibility

=====  
This article last reviewed: 14 November 1989

TOPIC -----

This article contains information about a QuickMail/Apple Tape Backup problem.

DISCUSSION -----

CE Software's QuickMail 2.0 server INIT causes the Apple Tape Backup software to freeze or crash the system when it is launched.

As of November of 1989, the only known workaround is to remove the QuickMail server INIT from the System Folder and restart the machine before attempting to back up the server.
