Netware for Macintosh 1.1: Enhancements and Fixes

===

This article last reviewed: 23 January 1990

TOPIC ---

Here's information on enhancements and fixes for Netware version 1.1 for
Macintosh. Note that Netware 2.1.5 revision C must be used.

DISCUSSION --

Enhancements:

- The NL/2 board is now supported.

- The Netware Control Center (an application that lets you view and modify
  network information) has been enhanced.

- System administrative functions (adding and deleting users and groups
   ONLY) can be done from the Macintosh workstation.

Problems that Have Been Fixed:

- IBM Token Ring Adapter (16K buffer)/shared memory address problem

- Losing connections with the file server

- Print queue losing connections with the file server

- File server not displayed in Chooser window

- File server could not read settings file for AQS and APS print VAPs

To obtain these updates, send Novell the following:

- Your name, address, and phone number

- If you are ordering the Netware update, designate disk size: either 3.5 or
  5.25)

- Proof of Purchase (copy of invoice)

- A list of desired items.

You can Fax or mail your order to Novell. the information to 801-377-6743 or
mail the data to:

    Novell, Inc.
