MacX25: List of Supported X.25 Functions

======================================================================

This article last reviewed: 13 June 1990

TOPIC -------------------------------------------------------------

I need the facts for the following MacX25 categories:

Packet retransmission support
Closed user group with in- and outgoing access
In- and outbound calls barred
In- and outbound calls carred with a c.u.g.
One way logical channel incoming and outgoing
Multi-link procedures
Direct call
Hunt group
Flow control parameter negotiation
Abbreviated address calling

DISCUSSION --------------------------------------------------------

Much of this information is in the manual.  We assume you want to know if
MacX25 "supports" the following X.25 functions:

Packet retransmission support                   No
Closed user group with in- and outgoing access  Yes
In- and outbound calls barred                   Yes
In- and outbound calls carred with a c.u.g.     Yes
One way logical channel incoming and outgoing   Yes
Multi-link procedures                           No  (No X.25 "MultiLink
                                                     Operation")
Direct call                                     N/A (but does have Call
                                                     Redirection Notification)
Hunt group                                      N/A
Flow control parameter negotiation              Yes
Abbreviated address calling                     Yes (implimented via
                                                     configurable address
```
