TOPIC ---

I need a cache card that plugs into the cache connector of the Macintosh
IIci. What products are available besides the DayStar Fast Cache IIci?

DISCUSSION --

The only cache card for the Macintosh IIci that we know of, other than the
Apple and DayStar cards, is the Micron Technology (acquired by Xceed
Technologies) MBXC1. This card contains 128K of cache memory.

NOTE: As of September 1991, the Apple Macintosh IIci Cache Card is
included with all Macintosh IIci computers.

To locate a vendor's address and phone numbers, use the vendor name as a
search string.
