System 6.0.7: Localized for KanjiTalk and ChineseTalk

=====
This article last reviewed: 25 January 1991

TOPIC -----

When will KanjiTalk and ChineseTalk for the Macintosh Classic, LC, and IIsi be available?

DISCUSSION -----

System Software 6.0.7 localized for Chinese-Simplified and KanjiTalk have been released. Chinese-Traditional was released for 6.0.6 software and will not be localized in 6.0.7 (note that many countries used 6.0.6 software with patches to work with the new models until 6.0.7 was localized).

You may wish to check on the availability of these localized versions of System Software with your local distribution center.
