• For technical accuracy.

TOPIC -----

Can customers use the Virtual Memory feature of System 7, if they have third-party accelerators for the Macintosh Plus, SE, or Classic?

DISCUSSION -----

No. The virtual memory feature of System 7 is available only on the Macintosh II family of computers that are equipped with a 68030 microprocessor or equivalent. System 7 Virtual Memory was written for the Macintosh II family (and more specifically, for the Macintosh II ROMs). Please contact the developer of your accelerator for additional information.
