System 7: Upgrade Information for AppleShare File Server

=====
Article Created: 29 May 1991
Article Last Reviewed: 15 October 1991
Article Last Updated: 15 October 1991

TOPIC -----

Is the AppleShare File Server software compatible with System 7?

DISCUSSION -----

No. The AppleShare File Server software version 2.0 is not compatible with System 7 and should not be installed on a System 7-based Macintosh system.

AppleShare is fully network-compatible with both System 6 and System 7. Both System 6 and System 7-based Macintosh users can access an AppleShare File Server running on a System 6-based machine.

AppleShare Server 3.0, which was announced on October 15, 1991, is fully compatible with System 7. For upgrade information, please locate the article titled "AppleShare Server 3.0: Upgrade Information".
