HyperCard 2.0: When Double-Clicking Fails To Select

===

This article last reviewed: 5 March 1991

TOPIC ---

When editing HyperTalk scripts, I frequently notice the problem that
double-clicking on a word fails to select it. The single click (place
insert point) and triple click (select entire line) functions continue to
work properly.

DISCUSSION ---

This problem can be fixed by upgrading to HyperCard 2.0v2.
