TOPIC -------------------------------------------------------------

With PATHWORKS for Macintosh, what system software is required?

DISCUSSION --------------------------------------------------------

The Macintosh workstation must have the following software installed before
you can install and use PATHWORKS for Macintosh:

• System Software version 6.0.4 or later
• AppleShare workstation software
• AppleTalk Phase 2 software (for use with EtherTalk card)

The AppleShare workstation software is required because you install the
Macintosh software for PATHWORKS for Macintosh from a VAXshare file server.
