TOPIC ---

On a network with many workstations running A/UX, I log in to our
AppleShare server, do some work, and log off. The window on the server
indicates that I'm still logged in. This problem doesn't happen with
identical workstation running under Macintosh System 6.0.7.

DISCUSSION --

This problem happens under both A/UX 2.0 and 2.0.1. User's names are not
IMMEDIATELY disconnected from the Connection User List in AppleShare, but
they will disappear after about two minutes from log off of an A/UX
workstation.
