TOPIC ---

How do I change the mapping of the keyboard in X11 under A/UX? I want to
assign "esc-a" and "esc-d" to the function keys of the extended keyboard,
because these keystrokes are cursor movements in the X client application
instead of arrow keys.

DISCUSSION ---

The command "xmodmap" let's you see the current mapping of your keys. You
can also use this command to modify the mapping of various keys on the
keyboard.

To obtain a display of your current settings, enter the command:

xmodmap -pk

There is a man page for xmodmap that gives you the information necessary
for mapping the keys.
