TOPIC -----

I'm using GateKeeper Aid with AppleShare. When I start the server, I get the message, "GateKeeper Aid encountered FCB expansion".

Is this serious? What is FCB expansion?

DISCUSSION -----

You have nothing to worry about. When you boot AppleShare, it makes major changes in the way the system is configured and GateKeeper notices the changes.

The FCB expansion is the File Control Block. This tells the system how many files can be open at one time.
