TOPIC -------------------------------------------------------------

Is Optical Character Recognition software available for Apple II computers?

DISCUSSION --------------------------------------------------------

WestCode Software developed INWORDS, Optical Character Recognition (OCR)
software for the Apple IIe and Apple IIGS.  You use the software with
hand-held scanners.  It scans text at up to 3000 characters per minute.

You can find the address and phone number for this company in a separate
article in the Tech Info Library.
