Article Last Updated:

TOPIC -----

Some third-party software products cause system crashes when AppleTalk is turned off.

DISCUSSION -----

If AppleTalk is turned off, you may get error codes 3, 10, 12, or 85 while using system software 6.0.5 or higher with network-aware software. Some third-party software products go out and check the network, and if AppleTalk is turned off, the system crashes.

To fix this problem, use the Chooser to make sure AppleTalk is turned on.
