            • Vendor name.

TOPIC ---

Are there any drivers or programs that print color documents to a
ImageWriter II with a color ribbon?

DISCUSSION --

Most color applications can print in color on an ImageWriter II with the
standard driver. These include SuperPaint 2.0 and Cricket Draw.

Silicon Beach Software's (now Aldus Consumer Division) SuperPaint is a
graphics editor for bit-mapped (paint) and object-oriented (draw) art.
You can toggle between the paint and draw layers by clicking an icon.

Computer Associates International's Cricket Draw is an object-oriented
drawing program that can take advantage of the graphics capabilities of
PostScript printers (from the LaserWriter to the Linotronic 300). The
package consists of two integrated programs: a drawing window and a
PostScript language editor. The programs can be used independently or in
conjunction.

To locate a vendor's address and phone numbers, use the vendor's name in a
search string.
