AppleTalk: Modem Sharing over Network (8/93)

=====
Article Created: 15 April 1991
Article Reviewed/Updated: 25 August 1993

TOPIC -----

I am looking for software that allows modem sharing over an AppleTalk network.

DISCUSSION -----

Here are two possibilities:

The three-port C-Server from Solana Electronics lets multiple users on an AppleTalk network share up to three serial peripherals. These devices may be modems, OCR readers, plotters, mainframes, printers, typesetters, protocol converters, or any combination of RS-232 connections.

SilverServer Software from La Cie, Ltd. allows the sharing of Hayes-compatible modems and hard disks over a LocalTalk network or telephone line. The maximums are 32 users and 224 drives per network. You also get DiskDup+ and SilverLining utility software.

To locate a vendor's address and phone numbers, use the vendor name as a search string.

Editor's Note 22 June 1992: Solana has discontinued business to our knowledge, so we are unable to refer you to them directly for further information.
