Article Last Updated:

TOPIC -----------------------------------------------------------

A customer used a generic brand of transparencies, and they melted inside
the Personal LaserWriter LS.  What are the transparency specifications for
the Personal LaserWriter printers?

DISCUSSION ------------------------------------------------------

Always use transparencies that are made for use with a laser printer.  The
transparency must be able to withstand 200 C (392 F).  Apple recommends
that you use the face-up tray to prevent the transparency from curling.

Personal LaserWriter Transparency Specifications
-------------------------------------------------
Thickness:              0.100 to 0.110 mm
                        3.9 to 4.3 mils
Cutting Dimension:      0.7 to 0.79 mm (0.028 to 0.031 inch)
Cutting Angle:          90+/-0.2 degrees
