MacX25: Multiple Workstation Support

=====  
Article Created: 2 August 1991

TOPIC -----

How many workstations does the MacPAD software (shipped with MacX25) support?

DISCUSSION -----

If each workstation uses only one virtual circuit, 64 workstations can access the MacX25 server simultaneously. However, applications can be written so that multiple circuits can be accessed by one workstation; therefore, the number of workstations that can be supported depends on how the application is written.
