Macintosh Volume Drag-Copy: Why Installer May Be Needed

=====
Article Created: 14 May 1991

TOPIC -----

If I completely drag-copy an entire mass-storage volume, including the System Folder, to another volume, do I still need to use the Installer to rewrite the System on the target volume?

DISCUSSION -----

Various Macintosh models have slightly different ROM codes. The Installer determines which model it is installing to, and installs the appropriate ROM patches for each model.

If you have already run the Installer on a volume and you want to transfer that System to another volume that will be used on the same or similar computer, there should be no problem.

Also, if you do a customized install, and choose "System Software for any Macintosh", there should be no problem using that volume on different Macintosh models.
