AppleShare: Troubleshooting Auto Log-On Problems

=======================================================================

Article Created: 14 May 1991
Article Last Reviewed:
Article Last Updated:

TOPIC -----------------------------------------------------------

All the computers on my AppleShare network have been configured for Auto
Log-On.  Now suddenly, everyone needs to log on manually.

DISCUSSION ------------------------------------------------------

It is possible that your AppleShare Prep file is corrupt or lost.  Try
throwing away your AppleShare Prep and rechoosing your printers and the
servers.  Also, check for a conflicting INIT loading before AppleShare or
if there is more than one System on your startup drive.
