Apple IIGS: Daisy Chaining DuoDisks

=======================================================================

Article Created: 14 May 1991
Article Last Reviewed:

TOPIC -----------------------------------------------------------

My Apple IIGS has a 3.5-inch drive plugged in to the internal port.  Can I
daisy-chain a DuoDisk off the 3.5-inch drive or does the DuoDisk need its
own separate controller in slot 6?

DISCUSSION ------------------------------------------------------

Older Apple IIGS computers (ROM 01), you can connect the DuoDisk directly
to the SmartPort or to a drive attached to the SmartPort.

Newer Apple IIGS computers (ROM 03) need a DuoDisk interface card.
