            • For technical accuracy.

TOPIC ---

I want to use the powerfail calls in A/UX 2.0. I want to use the
/etc/powerfail script to clean up when someone pulls the plug on a computer
(or hits the reset programmer's switch).

Can the /etc/powerfail script be used this way? Will the system have
enough time to execute these commands?

DISCUSSION ---

The /etc/powerfail doesn't work under A/UX because the Macintosh hardware
doesn't have enough backup battery power.
